

MAN DRIVER APP

Smart and in keeping with the times, the MAN Driver App accompanies you, the truck driver, as you go about your work. With the digital Pre-departure Check, the Quick Manual with visual recognition of symbols, the Mobile24 Breakdown Call and MAN Trucker's World, the MAN Driver App supports you in your daily tasks and is there to assist you with valuable functions in the event of a breakdown too. An intelligent link between the driver's smartphone and the RIO platform* allows application-related information to be transmitted to the fleet manager. You as fleet manager can then view it and in future transfer it to the MAN workshop of your choice. And that's only the beginning! The MAN Driver App is constantly being expanded with neat and useful functions that will automatically become available with the app updates. The free MAN DigitalServices Hotline will be pleased to answer your questions on the MAN Driver App under the number 00800 63 44 48 25, Monday to Friday, 08:00 to 17:00 h. You will also find further information at www.digital.man/driverapp.

Services at a glance:

- **Pre-departure Check** – Before departing and whenever necessary you as the driver can document defects and damages in the vehicle quickly and simply using the app and call up the damage history. Both the results of the pre-departure check and the damage report can be made available to the fleet manager in overview form via the RIO platform* vehicle by vehicle.**
- **Quick Manual** – You as the driver can scan selected switches and warning lamps in the vehicle (for TGX with Euro 6 built in or after 2018). You then immediately obtain explanations on functions and, where relevant, recommendations for action in text form and have them read out loud using the language function.
- **MAN Mobile24 Breakdown Call** – In the app you as a driver can find out at any time exactly where you are. In the event of a breakdown you can use the app to send out a Mobile24 breakdown call and, via status updates, find out when the breakdown service will arrive at your location.
- **MAN Trucker's World** – With the app you as a driver can access the MAN Trucker's World magazine at any time to obtain interesting news about the club and from the truck scene.
- An Android™*** version of the MAN Driver App is now available on Google Play***. Available languages: German and English. Czech, Danish, Dutch, French, Italian, Polish, Portuguese, Rumanian and Spanish will follow continuously until the end of 2018.
- Requirement: Internet access is necessary to make full use of the MAN Driver App.

* Operated by TB Digital Services GmbH.

** So that the data from the digital Pre-departure Check and the damage report can be sent to the fleet manager, the fleet manager will need to log in via the MAN Marketplace. He/she must also send the driver an invitation via the user admin. When the driver has accepted the invitation, the overview of results from the Pre-departure Check can be viewed by the fleet manager via the portal (Pre-departure Check application). To allow the fleet manager to view the detailed version of the damage report and to release the information to the MAN workshop of his choice (the "Forward to workshop" function will shortly be available), the "MAN ServiceCare" service (currently available only in selected countries) must be booked via the MAN Marketplace. For this the vehicle must be fitted with a RIO Box (Telematik Bord Module 3). For a more extensive data history with a maximum storage time of 25 months instead of 10 days the fleet manager can also book the "MAN Advance" service, which is subject to a charge.
